

NAME

ppgvdflt - get address of pattern variable default value

SYNOPSIS

```
#include <ppsubs.h>      /* pattern definitions and struct */
```

```
char *ppgvdefault(viptr, index)  
    PPATVI *viptr; /* pointer to the variable information */  
    int index;     /* var info struct index */
```

DESCRIPTION

This subroutine returns a pointer to the <index> variable default found in the variable information pointed to by viptr.

SEE ALSO

pattern(5L)

DIAGNOSTICS

ppgvdflt() produces no diagnostics.
