ADDS 3153
Video Display Terminal

The ADDS 3153 display terminals provide advance data access, data manipulation and display features not found in ordinary terminals. Dual-host functionality allows users to simultaneously access applications from multiple hosts. Cut and paste capability saves time by allowing user to move data from one application to another and from host to host without lengthy keystroke sequences or retyping.

By offering a broad range of screen formats and keyboard programmability, the ADDS 3153 provides the flexibility to meet each users specific requirements.

The 3153 emulation set includes the IBM 3151, Wyse WY-50/50+, WY-60, DEC VT-100, VT-220, VT 320 and the ADDS Viewpoint and TeleVideo TVI-925. The ADDS 3153 is an ideal solution for customers using IBM display terminals in legacy applications.
