TELL(II)   **TELL(II)**

NAME

   tell — get file offset

SYNOPSIS

   (tell = 40.; not in assembler)
   (file descriptor in r0)
   sys tell
   (offset in r0-r1)

   long tell(file)
   int file;

DESCRIPTION

   Tell returns the current read/write pointer associated with the open file whose descriptor is specified as the argument *file*.

SEE ALSO

   seek (II)

DIAGNOSTICS

   C-bit set or −1 returned for an unknown file descriptor.

BUGS

   Error bit (c-bit) is set for an unknown file descriptor. From C, a −1 return indicates an error.
